⚡ What is Cloud Storage?

Cloud Storage is a way of storing data online instead of your local computer. It requires an internet connection in order to upload, modify, and share documents, presentations, spreadsheets, images, audio, video, etc., with others. Online storage service providers don't store any data on the hard disk of your PC. Cloud storage tools help you to access your data from any device.

Is my data secure with Cloud Computing Storage?

Since data is stored remotely rather than your premise, apprehensions about data theft and privacy are obvious. But most cloud computing storage companies encrypt data while in transit or at rest. Also, their employees only get logical access to your data. Most companies adopt very strict protocols to ensure data security, confidentiality, and privacy.

If your data has peculiar security requirements, you could opt for a hybrid cloud where some data is stored with the cloud provider while some at your own premises.

! Is there a size limit on the File I store or transfer using Cloud Storage?

Most [free cloud storage providers](#) allow you to store and transfer a single File that is up to 100MB in size. However, some allow you to store files up to 2GB in size, useful in transferring HD videos.
